

Modular Mac Keyboard

Full Size Compact Design

The Modular Keyboard's 15.5" foot print is compact in size, yet offers full size keys. With the optional Palm Rest, this keyboard can become ergonomic, taking the strain away from typing.

USB Hubs

3 High Speed 2.0 USB ports located on the left, right and back of the keyboard make placing modules and USB devices simple and convenient. Our modules work on either the left or right side, so left & right handed users can set it up however they want.

Customize Your Experience

Design your own keyboard, select from a wide range of Modules to configure and customize your Keyboard to meet your needs, be it for business or entertainment. Upcoming modules include a Mechanical Numpad, Trackball, Touchpad, Card Reader & more.

AC Power Supply

Supply power for all of your power hungry USB devices with our additional AC power supply (included). Plug this in and all three USB ports get 500mA of continuous power. The AC adaptor accepts 100V to 240V.

N-Key Rollover Function

With a 16 Key Rollover Queue, no matter how fast you type, the keys will always respond. Unlike other Keyboards that can only read keystrokes as their inputted, the Modular Mac Keyboard remembers up to 16 keystrokes. Power typists and gamers love this feature.

Multi Media Hot Keys

Familiar Mac Keyboard Hot Keys (Volume control, mute, cd open/close, Apple key)

Key Switches

Featuring durable, long-lasting Cherry Mechanical Switches, good for up to 50 Million Life Cycles (clicks), the Modular Mac Keyboard will outlast most other keyboards on the market. The Mechanical Switches offer faster typing and quicker response than membrane switches. Available in Blue (tactile) or Brown (low force) Cherry Mechanical Key Switches, to suit your preference.
